

Denuvo Mobile Protection

2022 Cybersecurity Excellence Award-winning solution protecting the monetization of your game without changing the gameplay experience

77%* of players say they'd leave a game if there are cheaters

46% say they're less likely to buy in-game content if there's cheating

*Irdeto Global Gaming Survey: The Last Checkpoint for Cheating

Maximum security

Thanks to our multi-layered approach to protection.

Invisible for players

No noticeable impact on the device performance or the gaming experience.

Easy integration

Takes only minutes, not days and requires no modification of the source code.

Full transparency

You get real-time insights into every single hacking attempt.

We offer over 20 mobile game security plug-ins, grouped into the following categories:

Anti-debugging Hook detection Jailbreak/root detection Emulator detection Integrity verification

Protection where it's needed

We don't put protection where it's easy. We put it where it makes sense for the game experience.

Game profiling

We profile your game to find the best location for protection, with the least impact.

Optimal setup

We determine optimal protection setup by combining profiling data with static analysis.

Performance review

We make the final performance optimization to make sure there's no impact on gameplay.

Automated updates

We constantly improve our protection and provide you with monthly updates.

Denuvo security solutions in numbers:

1,000+ games protected | 2+ million builds reassembled | 2.4 billion users handled
