

GAME-CHANGING PRECISION IN FLEET MANAGEMENT: TRAILER VALIDATION

Can your current asset tracking solution verify that your driver has connected to the correct trailer without requiring additional hardware? Ours can! Keystone by Irdeto presents Trailer Validation – the power of precision and control at your fingertips.

Exceptional accuracy

Validate trailer attachments with just a simple scan and make sure every trailer is exactly where it should be.

Cost saving tracking

Mispulls, potentially costing over \$15,000 per incident, are a thing of the past with our real-time system alerts, saving your company time and money.

Simplicity at its best

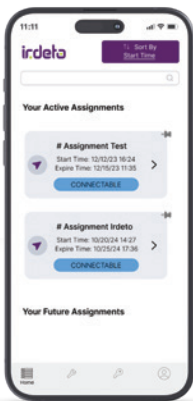

An intuitive app and straightforward procedure for simplified trailer management, makes it quicker and more accessible than ever.

A fit for all needs

Tailored to meet diverse transport requirements with a level of versatility and adaptability previously unseen in the industry.

The ideal solution for any fleet, large or small.

HOW DOES TRAILER VALIDATION WORK?

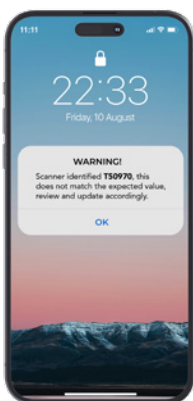

Connect to your current ecosystem

Integrate it easily with any fleet management system that you currently use, via an API.

No hardware required

Easy to use and fully functional via our Irdeto by Keystone app – just scan and confirm!

Handy dispatch notifications

An email, SMS or push notification is sent if a driver is trying to leave with the wrong asset.
